

Guide to the ENC22 Virtual Platform (powered by GRIP)

The ENC22 Virtual Platform is an intuitive platform that will take just a few minutes to get used to.

Nevertheless, we recommend that you read the guide to get the best from all platform features.

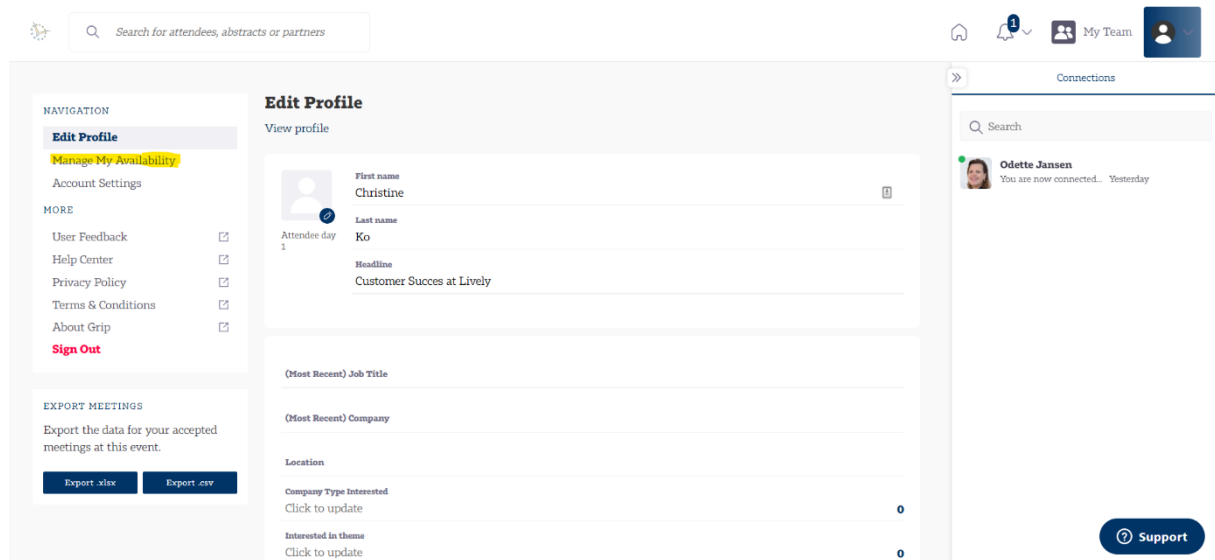

- The platform gives access to sessions and pre-recorded videos
- You log in by entering the credentials provided by e-mail on September 20th or after your completed registration
- The abstract book will become available one week prior to the start of ENC22
- Registered attendees can access the online platform and watch back all sessions until one year after ENC22

About your internet connection:

- You will need a strong internet connection. We recommend a minimum dedicated 350kb/s down per downloaded stream, as well as 350kb/s upper uploaded stream to maintain a stable video connection
- Before you log in, be sure that no other software is using your devices at the moment.
- Use [this link](#) to test your internet speed
One megabit (Mbps) is equal to 1,024 kilobits (Kbps).
- For restricted networks, see requirements [here](#)
- You can use the following page from Vonage to run a pre-call hardware and software test prior to your session to make sure you have a stable connection:
<https://tokbox.com/developer/tools/precalls/>

Profile Settings

When you first visit ENC22 Virtual Platform, you will be asked to update your Personal Profile and indicate your availability during congress days.

The screenshot displays the 'Edit Profile' page of the ENC22 Virtual Platform. The interface includes a top navigation bar with a search bar, a home icon, a notification bell, and a 'My Team' button. The main content area is divided into three sections:

- NAVIGATION:** Contains links for 'Edit Profile' (highlighted), 'Manage My Availability', 'Account Settings', and a 'MORE' section with links for 'User Feedback', 'Help Center', 'Privacy Policy', 'Terms & Conditions', 'About Grip', and a 'Sign Out' button.
- Edit Profile:** The main section for updating user information. It includes fields for 'First name' (Christine), 'Last name' (Ko), 'Headline' (Customer Success at Lively), '(Most Recent) Job Title', '(Most Recent) Company', 'Location', 'Company Type Interested' (with a 'Click to update' button), and 'Interested in theme' (with a 'Click to update' button).
- EXPORT MEETINGS:** A section for exporting data, with buttons for 'Export .xlsx' and 'Export .csv'.

On the right side, there is a 'Connections' panel showing a list of connected users, with 'Odette Jansen' listed as 'You are now connected... Yesterday'. A 'Support' button is located at the bottom right of the interface.

Programme

Left on the screen, you'll find the Programme. All sessions are displayed in chronological order. You can filter on date, track (themes) and tags (subtopics). The platform will be time-zone adjusted based on your current local time zone.

Partners

Meet the ENC22 Partners. You can filter by name, size and type. To view profiles, click on their logo to watch videos and download their brochures (Product). Request a virtual 1:1 meeting with one of the team members or send a direct message to the organization.

Attendees

A list of all registered attendees is shown here. You can filter by company name, job title and country. Request a 1:1 meeting or show your interest.

Speakers

A list of all presenting authors is shown here. You can filter by company name, job title and county. Request a 1:1 meeting or show your interest.

Mainstage

All live sessions are streamed from the Florence Nightingale mainstage in our Amsterdam studio: kickoff, opening ceremony, keynote presentations, and closing ceremony. After they've been broadcast, Keynote sessions will be available in ENC22 Virtual Platform after the congress.

Partner Area

Platinum & Premium partner breakout sessions – Grip livestream or roundtable - are scheduled in the Partner Area.

Round Table sessions (hosted by partners) are interactive video meetings. **Please start your camera and unmute your microphone only at the moderator's request.**

Oral Area

Open 24 hours a day, you can enjoy a virtual stroll through the oral presentations at any time that suits you. Just click on the title of the abstract text and watch the video. During congress days there are LIVE Q&A sessions with presenting authors. To attend a session, please click on the register button.

Attitudes and Opinions of Belgian District Nurses Towards Involuntary Treatment Use in Dementia Care

Roundtable Session

Oral Area - Theme 1: Towards person- and society - centred nursing

Tuesday 4 October 2022 11:00 - 11:30 (Europe/Amsterdam)

Sustainable goals
Research based

See the full abstract (incl. video and co-authors)

Introduction:
Due to the progressive nature of dementia, persons living with dementia (PLWD) at home are in need of extensive help and support in daily living. Sometimes, they may resist or refuse care, which is referred to as involuntary treatment. Involuntary treatment is commonly used in professional dementia care at home, and district nurses play a crucial role in its use. Studies suggest that their attitude towards involuntary treatment is linked with its use of it. However, knowledge about the attitudes and opinions of district nurses towards involuntary treatment is scarce. Therefore, more insight is needed.

Aim:
This study aims to explore Belgian district nurses' attitudes towards the use of involuntary treatment in dementia care at home, its determinants, and their opinions about its restrictiveness and discomfort of it.

Methods:
In a cross-sectional study, data were collected in a convenient sample of 296 Belgian district nurses using an online version of the Maastricht Attitude Questionnaire - Home Care. All district nurses had experience in dementia care at home.

Results:
Our study shows that Belgian district nurses had a neutral attitude regarding the appropriateness of the use of involuntary treatment in their clinical practice. In addition, they consider involuntary treatment use as moderately restrictive to PLWD and feel moderately uncomfortable when using it. When years of experience as a district nurse in dementia care at home increased, when district nurses had a lower educational background or when the care for PLWD was perceived as burdensome. They tended then to consider the use of involuntary treatment as 1) a more appropriate clinical practice, 2) less restrictive for the person living with dementia, and 3) less uncomfortable when using it.

Discussion:
Our results suggest that Belgian district nurses are not fully aware of the negative consequences of the use of involuntary treatment among PLWD at home. Therefore, it is necessary that they adopt a more critical attitude when confronted with the use of involuntary treatment.

Conclusion:
District nurses have no outspoken attitudes or opinions toward the use of involuntary treatment, but having more experience in dementia care or having a lower educational background is associated with a positive attitude towards the use of it.

Implications for practice:
The use of involuntary treatment has negative effects on the autonomy and quality of life in persons with dementia. District nurses play a key role in the prevention of it. Therefore, the development of interventions and guidelines supporting nurses' decision-making is warranted.

An Enhanced Purposeful Hourly Rounding Program: Impact of Proactive Toileting on Rates of Falls
Teresa R. Rasmussen, DNP, RN, SCRNP, CNML
Department of Nursing, Georgetown University School of Nursing & Health Studies, Washington, D.C.

Problem Description
Falls are a leading cause of injury and death in older adults. Inpatient falls are a significant concern for healthcare providers and patients. The purpose of this study was to evaluate the impact of an enhanced purposeful hourly rounding program on the rate of falls in a hospital setting.

Methods
This was a quasi-experimental study conducted in a hospital setting. The study involved implementing an enhanced purposeful hourly rounding program and measuring the impact on the rate of falls. The study included a pre-test and a post-test period.

Results
The results of the study showed a significant decrease in the rate of falls after the implementation of the enhanced purposeful hourly rounding program. The rate of falls decreased from 1.5 per 100 patient days to 0.5 per 100 patient days.

Discussion
The findings of this study suggest that an enhanced purposeful hourly rounding program can effectively reduce the rate of falls in a hospital setting. This is an important finding as falls are a leading cause of injury and death in older adults.

Limitations
The study had several limitations, including a lack of randomization and a small sample size. These limitations may have affected the generalizability of the findings.

Recommendations
Based on the findings of this study, it is recommended that hospitals implement an enhanced purposeful hourly rounding program to reduce the rate of falls.

Implications for Practice
The findings of this study have important implications for practice. They suggest that an enhanced purposeful hourly rounding program can effectively reduce the rate of falls, which is a significant concern for healthcare providers and patients.

PICOT Question
In a hospital setting, does an enhanced purposeful hourly rounding program (P) compared to standard care (C) reduce the rate of falls (O) in older adults (I)?

Available Knowledge
The findings of this study add to the existing knowledge on the impact of rounding programs on fall rates. They suggest that an enhanced purposeful hourly rounding program can be an effective intervention to reduce falls.
